DETAILED ACTION

1. Claims 29-42 are allowed. Claims are re-numbered as claims 1-14.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: The closest prior art of record discloses a method of mutual authentication in which a first message is encrypted by a first device using a first cryptographic key to obtain a first encrypted message, the encrypted message is sent to a host system that decrypts it for verification; a second encrypted message is transmitted from the host system to the first device for decryption and authentication. However, the prior art of record individually or in combination fails to disclose a client physical token comprising a random number generator, a unique client identifier, and a client key; client software adapted to be installed on the client to send a first challenge to the device, the first challenge comprising a first random number generated by the client random number generator and encrypted using the client key, the first challenge further comprising the unique client identifier; and device software adapted to be installed on the device to retrieve a stored client key associated with the client identification in the first challenge and decrypt the first random number in the first challenge using the retrieved client key, whereby decrypting the first random number authenticates the client computer to the device; and wherein subsequent data sent between the device and the client is encrypted using a key derived from the first random number and the second random number in light of other features disclosed in independent claims 29 and 36.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
